To optimize the processing of natural gas, accurate thermodynamic data are required. Here, we investigate the quality of the physically based BACKONE equation of state, which requires only 3–5 substance specific parameters for each pure component. For mixtures,

In general, thermodynamic properties can be divided into two general classes:

Extensive properties: An extensive property is dependent upon the amount of mass present or upon the size or extent of a system. For example, the following properties are extensive: Enthalpy. Entropy. Gibbs Free Energy.
